

Important Plans for Accessible Electronic Patient Records

Framlingham Medical Practice Statement of Intent

We are required, by NHS England, to provide the following services by 31 March 2015:

- **Summary Care Records (SCR)**

Framlingham Medical Practice is able to update changes to our patient summary information to their Summary Care Records at least once every working day.

- **Patient Access to their GP Record**

We are also working towards being able to offer our patients the facility to view online, export or print any summary information from their records i.e. medications, allergies and adverse reactions along with any other information which has been agreed individually between our patients and their GP. It is our intention that this will be fully available by the required date, if not before.

- **GP2GP Record Transfers**

We are actively using this facility to transfer patient records between practices when a patient either registers or de-registers with us. This does not apply to temporary registrations.
